

Agency's manual workflow is inefficient and unorganized.

- Tasks take too long to move forward and/or get completed
- No capability to track the work a staff person has completed on a given day
- Unclear ownership of work
- Data entry screens are awkward and inefficient

challenge

Streamline your processes with GL Suite's flexible automatic workflow functionality.

- Custom dashboards provide a high-level look at all the work a staff person must complete, along with deadlines
- Efficiently route work through your system using configured business rules
- Batch data entry saves you time

solution

Automated workflows – the final piece of the puzzle.

GL Suite's workflow capabilities allow agency staff to login and see an itemized list of exactly what work they must complete, along with a corresponding due date for each task. Your GL Suite system can be configured to automate every step in your workflow process, from reviewing new applications, to license approvals, requirements tracking, generating notices, and managing and tracking complaints. With GL Suite, processing applications becomes efficient and highly automated. GL Suite tracks the overall application status along with all related requirements, checklists, deadlines, fees, and so on using automated features. It also automatically prevents licenses from being issued until all requirements are met.

passionate about government

GL Solutions (passionately) stands for Government Licensing Solutions. Founded by ex-regulatory administrators, GL Solutions has provided government agencies with efficient and effective regulatory systems since 1997, delivering the perfect blend of software, solutions, and support.

Save time and energy using GL Suite's fast and efficient data entry feature.

GL Suite eliminates the need for redundant data entry with its fast and efficient data entry functionality. We understand that your agency staff hates nothing more than awkward and inefficient data entry screens, making it hard for them to do their job. We have invested heavily in data entry controls that make performing batch data entry and update fast and easy. For example, one of our clients has a screen where they can select multiple records all at once to renew, then click a button which enables all of the updates at once (including applying payment). One Screens enable users to enter large quantities of data on a single screen, making the creation of records for a new individual or facility simple and efficient.

- Automates the whole process and enables users to enter all data in one place.
- GL Suite automatically creates or updates the appropriate record using the inputted information.
- Configure One Screens for any number of data-entry processes.

Custom dashboards give your employees all the information they need - at a single glance.

Key features:

- Custom dashboards alert logged in staff of deadlines and assigned tasks
- Tasks can be color-coded to instantly inform users of their status (e.g. currently due, past due, no due date, etc.)
- Managers or administrators can quickly set up or modify all screens, menus, and business rules to reflect changes in your workflow
- Create batches for printing or emailing based on date range, license status, etc.
- Assign dashboards to a user, position type, and/or security group
- Records, individuals, tasks, and cases listed in the dashboard can be hyperlinked directly to the associated record
- Dashboards display all work currently in a staff member's name, complete with click-through links to directly access tasks
- Configure business rules to automatically assign the task to the next person in line when status is updated

start your solutions today

GL Solutions provides GL Suite, the configurable and highly-flexible software system successfully implemented many times over, to support certification, licensing, permitting, inspections, investigations, compliance, enforcement, and case management activities in various regulatory environments.
